

Assignment for AI Browser extension

2) AI BrowserExtension - With vibe coding generate the test scripts in the language selected (tool/language of your choice)

I've added the check box to generate the Test scripts along with the existing Feature file and Page class/object with vibe coding in the selected tool/language of user choice

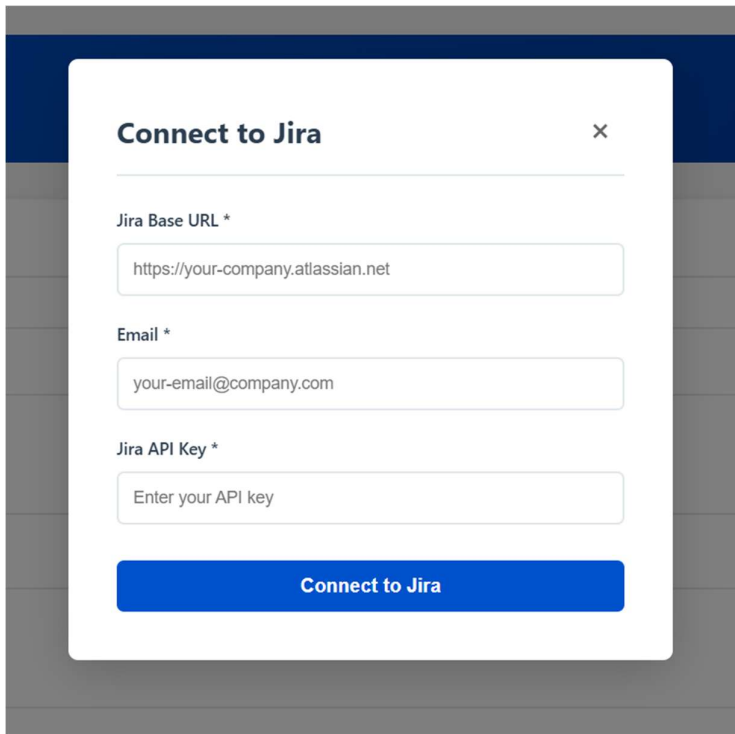

Assignment for user-stories-testcase generator

1) User story -tests generator --with vibe coding implement the

Jira integration to fetch user stories (both frontend and backend)

I've implemented both front-end and back-end to connect with Jira and fetch the user stories with vibe coding

A modal window titled "Connect to Jira" with a close button (X) in the top right corner. The form contains three input fields: "Jira Base URL *" with the placeholder "https://your-company.atlassian.net", "Email *" with the placeholder "your-email@company.com", and "Jira API Key *" with the placeholder "Enter your API key". Below the fields is a blue button labeled "Connect to Jira".

The "User Story to Tests" interface has a subtitle "Generate comprehensive test cases from your user stories". It features a "Jira Integration" section with a status "Connected to Jira - 1 stories available" and a "Disconnect" button. Below this is a "Select a User Story from Jira" section showing a single story: "KAN-2 Task 2". At the bottom, there is a "Story Title *" input field with the placeholder "Enter the user story title..." and a partially visible "Description" field.

2) Application is User story -tests generator, Add a button option to Generate Feature file for the user stories.

I’ve renamed the existing Generate button to Generate Test case and added a new button with vibe coding to generate Feature file

Generate Test Cases

Generate Feature File

8 scenario(s) generated • Model: openai/gpt-oss-120b • Tokens: 1818

```
Feature: Doctor Prescription Verification Workflow

  As a doctor, I want to verify and approve prescriptions so that patient medication can be safely dispensed.

  Background:
    Given a doctor is logged into the system with access to patient record "John Doe"

  @smoke @positive
  Scenario: Display pending prescriptions for verification
    Given the doctor opens the prescription module for patient "John Doe"
    When the system loads pending prescriptions
    Then all pending prescriptions should be displayed for verification

  @positive
  Scenario: Verify prescription without errors
```
