

S01 - DOM to Selenium Code-HW: In the shared collection model is given as “meta-llama/llama-4-scout-17b-16e-instruct” which is not used for the reasoning, I’ve changed the model to “openai/gpt-oss-120b” and tried with different DOM

S02 - TextFromImage-Url-HW & S04- MultiLingual-HW

I’ve combined these two and played with different kinds of images and languages

Body1: When I’ve given like this the model always translated the extracted text into English by default instead of the preferred language. So, I’ve changed like this to get the desired results. It is very helpful in getting the information or content in the desired language and it’s very much helpful for the kids to understand and learn the languages.

"content": "You are an OCR and translation assistant. Always translate ONLY into the target language requested by the user. Never respond in English unless explicitly requested."

Body 1:

```
{
  "model": "meta-llama/llama-4-scout-17b-16e-instruct",
  "messages": [
    {
      "role": "system",
      "content": "You are a multilingual OCR and translation assistant."
    },
    {
      "role": "user",
      "content": [
        {
          "type": "text",
          "text": "This is an image. First extract all visible text exactly as shown. Then translate the extracted text into Tamil. Return the response in the following JSON format only:\n{\n  \"extracted_text\": \"...\", \n  \"translated_text\": \"...\"\n}"
        }
      ]
    }
  ]
}
```

```
"type": "image_url",  
  "image_url": {  
    "url": "https://m.media-amazon.com/images/I/71S5VX9v70L._SX3000_.jpg"  
  }  
}  
]  
}  
]
```

S03-WebSearch-HW: I've used this to get the information and stats about the ongoing IPL
