

1) Check for TL;DR ,ELI -15 in prompting and see the difference in output

I tried the TL;DR and ELI-15 for Test automation using playwright. When I initially gave the prompt like below it gave a very detailed huge information at the beginning

Tell me about Test Automation using playwright.

When I gave TL;DR it gave me the synopsis of the same which is short and crisp.

I've tried the same to understand about Transformers in LLM, It's very useful.

ELI-15: I've tried the same Test Automation using playwright with ELI-15, the information which I got is in a very understandable way. Loved this as it's very much helpful to get to know and work on the new concepts and technologies.

2) Using chain of thoughts

a) Generate automation framework architecture

b) Generate Test strategy document

First, I'll start with **Test strategy document** as being an experienced manual tester. I've been into the Core Telecom billing and I need a test strategy document for providing offers to the customers in precise Port-in and port-out customers. I've not only derived the test strategy document alone and I've generated the use cases for the same, It's been awesome and really helpful.

I've tried with the same prompt again and again, couple of questions remains the same but others keep changing.

Context

Act as an experienced core Telecom billing Test Manager

Instruction

Design a Test strategy Document to provided offeres for Telecom billing domian to the Port-in and port-out customers

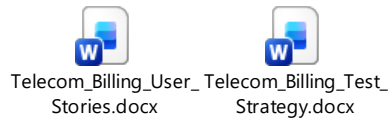

[MANDATORY] Ask me 5 valid multiple choice questions one by one

[STRICTLY] ONCE AFTER ANSWERING THE FIRST QUESTION Go with next question

[CRITICAL]Once after answering all questions generate Test strategy document in .docx format

Persona

Act as a PO and generate the Userstories in .docx format

Now I'll come to the automation frame work, last but not the least, I used to work on the XML APIs since the beginning and I've generated the automation frame work using python for Linux environment by using the below prompt. It's super cool, I think I can implement it in my regular work to reduce the manual work.

Context

Act as an Automation Architect to design the framework for XML API Automation using python for Linux environment

Instructions

[MANDATORY] Ask me 5 multiple choice questions one by one

[MANDATORY] Once after answering the first question ,proceed with net

[MANDATORY] Generate Framework Structure FirstAfter completing all teh questions

[STRICT] Proceed Step by Step for framework implementation

[STRICT] Up on my approval proceed with the next step
