

Done the postman local MCP for claude and fixed the issues using vibe coding and able to fetch and run the collections from the postman

The screenshot displays the Visual Studio Code (VS Code) interface with the following components:

- Left Panel (EXTENSIONS):** Lists installed and recommended extensions. Installed extensions include Claude Code for VS Code, Debugger for Java, Extension Pack for Java, GitHub Copilot modernization, and Gradle for Java. Recommended extensions include Container Tools, npm Intellisense, and MCP Servers - INSTALLED (Atlassian Rovo MCP Server and postman-api-mcp).
- Center Panel (Fetch the collections):** A table showing API requests and their status. The table has columns for request ID, method, URL, and status. The status column shows errors like "getaddrinfo ENOTFOUND" and "Same DNS failure".
- Right Panel (mcpjson):** A JSON file showing the MCP server configuration. The configuration includes a "tools" array with 124 tools.
- Bottom Panel (OUTPUT):** A log window showing the output of the MCP server. The logs indicate that the server is initialized, loaded instructions, registered tools, and started stdio transport. It also shows the server connected and received MCP initialization data.

Request ID	Method	URL	Status
1	GET	.../api/now/table/change_request	getaddrinfo ENOTFOUND
2	DELETE	.../change_request/{{gbl_sys_id}}	Same DNS failure
3	POST	.../change_request?sysparm_fields=...	Same DNS failure
4	PATCH	.../change_request/{{gbl_sys_id}}?sysparm_fields=...	Same DNS failure

```
{
  "tools": [
    {
      "name": "Visual Studio Code",
      "version": "1.131.0"
    }
  ]
}
```
